

iBase IntelliShare 8

INTELLIGENT SHARING & COLLABORATION

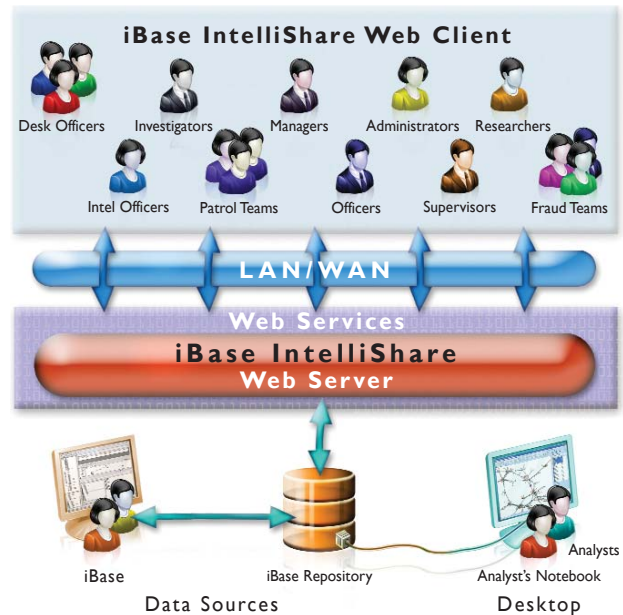

Accelerating Your Mission.

iBase IntelliShare 8 is a Web-based application providing self-service and real-time access to intelligence stored in *iBase* repositories; enabling faster, informed decision making and empowering collaboration.

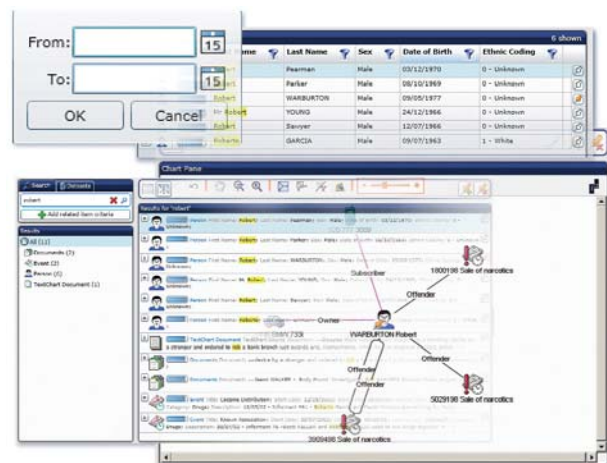

The *iBase* database is the intelligence repository at the heart of i2's Intelligence-Led Operations Platform (IOP). *iBase* supports the needs of analysts to capture, control and analyse multi-source data in a secure environment through its rich functionality and tight integration with *Analyst's Notebook*.

iBase IntelliShare extends *iBase* to the wider operational team by providing self-service access to the high value intelligence and analytical products held in the *iBase* repository.

This broader user community can find, explore and contribute to the rich intelligence in the repository through an easy-to-use Web interface. This consequently frees the analyst to dedicate their time to developing intelligence and analytical products which can be delivered to the operational team through the system. *iBase IntelliShare* enables analysts and operational users to work concurrently and collaboratively on the same data to make faster and better informed decisions.

Share intelligence and analytical data stored in your iBase repository.

Powerful filtering and visualisation capabilities help users search and find data quickly and intuitively

Ensure valuable intelligence is available immediately with real-time data access

- Intuitive, task-oriented Web interface can be used by all operational teams
- Zero in on relevant results with confidence by using i2's most powerful search technology ever, Search 360
- Explore *iBase* records, documents or charts in more detail through
 - Single-click access to all related items
 - Visualisation tools to quickly identify associations, clusters and patterns

Empower collaboration by extending the value of *iBase* intelligence and analysis to the entire team

- Alleviates the 'analyst-in-the-middle' information bottleneck, enabling the whole operational team to find and explore intelligence in *iBase*
- Average time spent waiting for analysts to provide non-critical intelligence from a search slashed from days to seconds, boosting productivity across the enterprise
- Organisations can leverage the flexible and robust security layer in *iBase*, ensuring compliance with enterprise rules while enabling seamless Web and desktop access

iBase IntelliShare 8 key features:

Real-time Data Access

- Find information using i2's Search 360 technology
 - Single search across all records, charts and documents
 - Post-filtering (including date ranges) and sorting enabled

Collaboration Tools

- Work with datasets
 - Datasets created in *iBase IntelliShare* are also available in the *iBase* desktop client and vice versa
 - Each user has a 'Working Dataset' space to keep track of useful information, including the ability to create new datasets and add to existing datasets from the results grid
- Data input
 - New records can be created based on the entities within the *iBase* database
 - Allows controlled and secure data entry
- Web browser access for operational users which is easy to use and task oriented
- Audit & security
 - Activity tracked in audit log
 - Access controlled by user permissions

Place real time intelligence at point of need.
